iVerify Enterprise

Real Threats. Every Mobile Device.

Modern Mobile Security for the New Frontier

In the dynamic landscape of today's enterprise, mobile devices are no longer just tools; they are pivotal to business operations, introducing a new frontier of risk that demands specialized protection that goes far beyond traditional defenses. We're facing an evolving threat surface, from sophisticated fileless malware and deceptive smishing attacks to evasive malicious applications and stealth credential theft.

A robust mobile security posture isn't just about mitigation, but it's about strengthening your overall enterprise security. You don't need to trade off productivity or employee privacy for security to empower your workforce. The time for reactive measures is over. It's time for a comprehensive mobile strategy solution that anticipates and neutralizes these threats before they impact your business.

iVerify Enterprise delivers powerful, real-time mobile threat detection and response, specifically designed for today's mobile world, so organizations can quickly stop threats across all devices—personal or company-owned—while keeping employees productive and private.

The solution delivers:

Unrivaled Mobile Threat Hunting
iVerify has extensive success in detecting advanced mobile malware and spyware, including state-sponsored threats like Pegasus and Predator.

Comprehensive BYOD & Managed Device Security
Secure every mobile device, personal or company owned, across the organization, ensuring data integrity and user privacy.

Privacy-Centric Security by Design
Delivers robust protection, prioritizing user privacy by operating without an MDM and strictly avoiding PII collection, all within a user-friendly experience.

Optimized Performance & Rapid Deployment
Experience negligible impact on device performance and benefit from a streamlined, rapid deployment process that gets your organization protected quickly.

Key Benefits

- **Unrivaled Mobile Visibility:** Kernel-level visibility with intelligent cloud heuristics and anomaly detection to automatically spot unusual and suspicious behavior, exposing privilege escalation, sandbox escapes, and other advanced attacks.

- **Real-Time Mobile Response:** Rapidly detects and mitigates threats, minimizing device and user disruption.

- **Scalable Mobile Security:** Secures large mobile workforces on personal and managed devices without compromising privacy or performance.

- **Unified Enterprise Integration:** Manages mobile endpoints via a unified platform, open API, and existing security infrastructure.
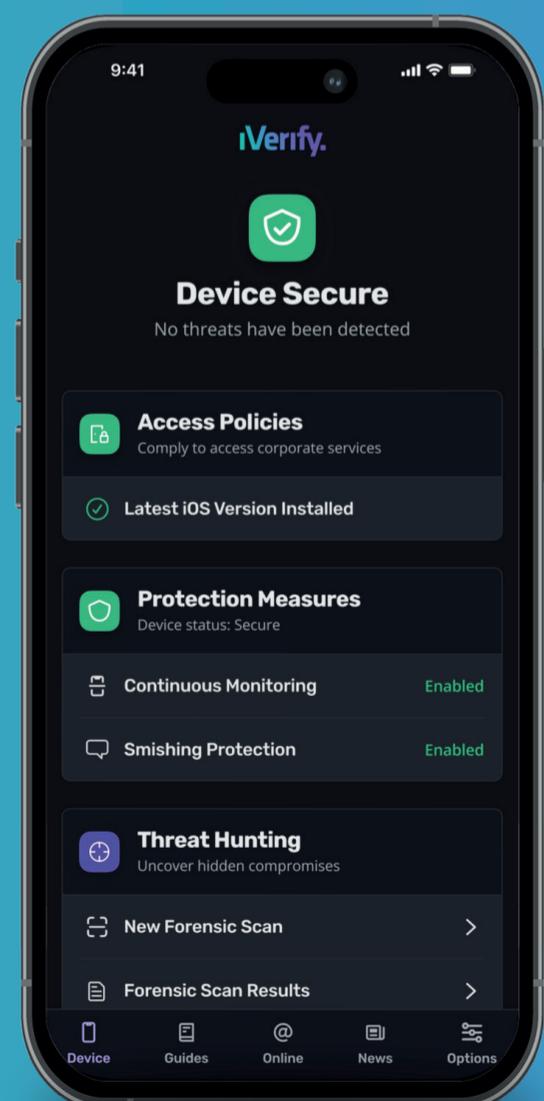

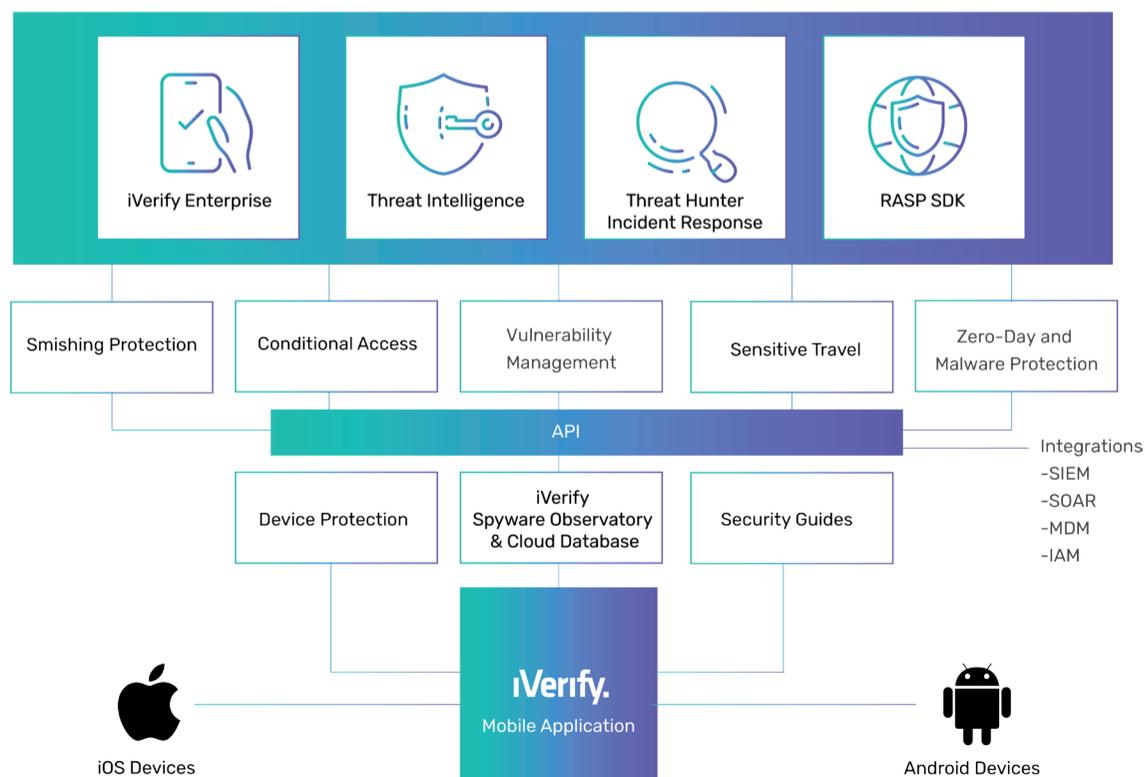

iVerify Enterprise Protection

Offers a robust feature set designed to combat advance mobile threats across enterprise and government environments.

FEATURE	DESCRIPTION
Advanced Malware Protection	• **Zero-Day and Malware Protection:** Protects against zero-days and malware, using real-time scanning, behavioral analysis, and continuous threat intelligence. • **Centralized SOC Visibility:** Consolidates data for comprehensive oversight within a unified dashboard. • **Automated Telemetry Uploads:** Enables automated, regular uploads of deep, kernel-level telemetry data.
Vulnerability Management	• **Vulnerability Oversight:** Provides administrators with clear visibility into disclosed vulnerabilities. • **OS Version Monitoring:** Tracks the operating system version on each device. • **Patch-Based Exposure:** Identifies device vulnerabilities based on installed security patches.
Smishing Protection	• **Smishing Defense:** Blocks smishing attempts using Secure DNS, without routing device traffic through a VPN. • **DNS Integrations:** Seamlessly integrates with Google, Cloudflare, and Quad9 DNS. • **Custom DNS Blacklists:** Upload and enforce your own DNS blacklists. • **Privacy-Focused Social Engineering Protection:** Eliminates the need to access private user data for protection.
Conditional Access (No MDM Required)	• **Seamless Integrations:** Quickly integrate with Okta & Azure. • **User Enrollment & Policy Config:** Streamlined user enrollment and policy setup. • **MDM-Free Access Control:** Set up access controls without an MDM. • **Seamless Integrations:** Quickly integrate with Okta & Entra ID.
Sensitive Travel	• **Employees Can Travel Confidently With Their Mobile Devices:** Blocks access to malicious networks so employees can use corp tools on the go. • **Security Teams Can Utilize Telecom Infrastructure Data:** Manage and track malicious networks and assess the risks associated with travel vulnerable devices through iVerify's threat intelligence product.
Enterprise Ready	• **Effortless Fleet-Wide Deployment:** Deploy across the entire mobile fleet (iOS and Android) in minutes. • **Instant Threat Alerts via Webhooks:** Customers receive immediate mobile threat alerts via webhooks within their platform. • **Open API & Key Integrations:** Features an Open API with integrations for Okta, Azure, and SCIM.4

iVerify Mobile Solutions

Solutions to protect every mobile devices in the workplace from the actual threats they face.
